

REPORT OF THE VICE-PROVOST, STUDENTS

STUDENT FINANCIAL SUPPORT

January, 2009

I EXECUTIVE SUMMARY

The Policy on Student Financial Support, approved by the Governing Council in April, 1998, calls for an annual report to include need-based aid by academic division, OSAP debtload for students graduating from undergraduate first-entry programs, and funding for graduate students in doctoral-stream programs.

The data on the student aid awarded by the University provide reassurance that the University continues to meet its commitment under the Policy¹, and to be accessible. The results demonstrate that we are in full compliance with the requirements of the *Student Access Guarantee for Working Families*, implemented by the Ontario Ministry of Training, Colleges and Universities effective 2006-07. Although not all universities have posted their 2007-08 numbers publically, those that are available show that the UofT spent \$3,331 per eligible student, which is 100 per cent more than the average of the eight other universities observed.

II NEED-BASED STUDENT AID (Appendix 1, Tables 1 and 2)

The University provides need-based aid in two forms. UTAPS (University of Toronto Advance Planning for Students) grants are awarded by Admissions and Awards to students who have reached the maximum for government aid from Ontario (OSAP) or other Canadian provinces, or aboriginal band funding, who have assessed need beyond that maximum. In addition, many students who may or may not have qualified for government aid and UTAPS qualify for grants awarded through the academic divisions on the basis of assessments of their individual circumstances. Divisions that lack sufficient resources of their own draw on central student aid resources managed by Admissions and Awards.

For 2007-08:

UTAPS grants	\$19,640,092	(2006-07: \$17,799,751)
individual grants	\$28,481,961	(2006-06: \$27,652,334)
Total	\$48,122,053	(2006-07: \$45,452,085)

The increase in expenditure in 2007-08 compared with the previous year can mainly be attributed to increases in the amounts awarded, rather than an increase in the number of eligible students. This reflects the growing gap between the amount government aid covers, and the assessed need of students. The increase in average UTAPS grants from

¹ No student offered admission to a program at the University of Toronto should be unable to enter or complete the program due to lack of financial means.

2006-07 to 2007-08 was 8.6 per cent, while the increase in the number of grants was 1.6 per cent. Appendix 1, Table 1, demonstrates that need-based student aid from the University increased from about \$1.5 million in 1992-93 to about \$48.1 million in 2007-08. This is a direct outcome of the implementation of the Policy on Student Financial Support in 1998, and of the increased resources made available from the OSOTF program and tuition reinvestment.

III DEBTLOAD (Appendix 1, Figure 1)

The Policy specifies that the annual report should include information about the debt levels carried by students upon graduation from first-entry undergraduate programs. Monitoring the total debt and repayment patterns of graduating students is an essential element in assessing the ongoing efficacy of the University's Student Financial Support Policy.

The average debt of students graduating from first-entry programs in 2008 who had borrowed from OSAP (45 per cent of all graduates) was about \$19,400. This compares favourably with the average in 1999, the first year in which debt was tracked, when the average was about \$16,000. Over the nine year interval, the proportions of students graduating with debts of \$15,000 or less (including zero) have remained relatively constant. The increase in the average debt can be attributed to a small shift in the proportions of students with debts between \$15,000 and \$25,000 to the higher range above \$25,000. The Ontario government provides loan forgiveness to reduce loans to a maximum of \$7,000 per year of study. The increased average debt reflects the fact that the majority of Arts & Science students on all three campuses are completing 20-credit degrees, and that greater numbers of those students take more than 4 years, and add additional terms or years of borrowing, to do so.

IV PART-TIME STUDENTS

Students enrolled in a courseload of 60 per cent or more (40 per cent for students with a permanent disability) are defined as fulltime by both the University and the federal and provincial governments, and hence are eligible for to be considered for OSAP and UTAPS. Consistent with the Policy on Student Financial Support and in consultation with the Association of Part-time Undergraduate Students, the University developed a unique assessment methodology to provide need-based aid to part-time students under the Noah Meltz Program. The program covers tuition, books, transportation and childcare for one course per session. In 2007-08, approximately \$470,000 was awarded.

V INTERNATIONAL STUDENTS (Appendix 1, Table 5)

In 2005, the Governing Council approved a Statement of Commitment Regarding International Students. With respect to financial support, the Statement said:

- (a) International students who are admitted and enrolled may encounter financial emergencies and the University will provide financial assistance as needed and where possible.
- (b) The University will develop a program of international admission scholarships using its own resources and support from external sources; these scholarships will be awarded on the basis of both exceptional academic merit and financial need.

In 2007-2008, exclusive of graduate fellowships, the University provided approximately \$3.4 million to international students in the form of grants (both merit- and need-based). This means that approximately 15 per cent of international students were assisted. A new scholarship program, based on both need and merit, has been created to recognize a small number of exceptional international first-entry applicants. The program, which provides full financial support to the scholarship recipients throughout their undergraduate studies, is highly selective and based on nomination from the top schools around the world with which we have ongoing contact. There are currently five such international scholars enrolled, one in second year and four in first year. All are exemplary students.

VI GRADUATE STUDENT SUPPORT (Appendix 1, Table 6)

In 2000, the Task Force on Graduate Student Financial Support, set a goal of establishing guaranteed minimum packages of funding for the first 5 years of doctoral-stream graduate studies. Significant progress has been made; the data for 2007-08 show that a total of \$184.7 million was awarded to students (exclusive of funding from affiliated teaching hospitals.) It should be noted that these data refer to all graduate students, including international students, and not only those in the funded cohort.²

² It should be noted that the data for graduate students who qualified for purely need-based aid on the basis of the terms specified in the Policy on Student Financial Support are included in Section I and in Appendix 1, Tables 1 and 2. That funding is distinct from the figures shown above.

VII ACCESSIBILITY

The University's commitment to student financial support carries with it the need to ensure that access to our programs remains equitable for all students regardless of their income or cultural background. Historically, we have monitored student characteristics such as parents' level of education, visible minority status, and family income background and the available evidence is reassuring that the University continues to be accessible.

We participate in two major surveys shared by consortia of universities (the National Survey of Student Engagement, or NSSE; the Graduate Graduate and Professional Student Survey, or GPSS.) The U of T results compare very favourably with those of other universities. Notably, the proportions of U of T respondents who identified themselves as belonging to a visible minority³ in the 2008 NSSE survey were 71 per cent of first year undergraduates, and 65 per cent of senior year. The comparable benchmark figures for Ontario universities were 43 per cent and 37 per cent respectively.

With respect to parents' educational attainment, the 2008 NSSE results show that about 27 % of respondents (first year and senior year) reported that their parents had no post – secondary education, either at college or university.

The University is investigating additional, reliable means of monitoring accessibility. The most difficult factor to assess is family income background. Working with the University Registrar, the Hitachi Research Centre at the University of Toronto at Mississauga conducted annual surveys of undergraduate, professional faculty and doctoral-stream graduate students for a number of years from 1998 to 2006. Although the surveys provided statistically reliable data, the response rates fluctuated from year to year, as did students' reports of their parents' income levels. The reporting criteria for the Provincial Government's Student Access Guarantee are under development in consultation with the Council of Ontario Universities. We will also need to take those criteria into consideration in determining the most effective ways to continue to ensure that student accessibility is maintained.

³ Students were asked to assign themselves to one of 15 ethno-cultural categories. We have chosen the phrase "visible minority" for all respondents who selected a category other than "White."
